DETAILED ACTION

Response to Amendment

In response to the amendment filed March 31, 2006 in which the applicant cancels claims 1-6, 10-12, and 14-17, amends claims 7-9 and 13, adds new claim 18 and claims 1-9, 13 and 18 are pending in this application.

Reasons for Allowance

1. Claims 1-9, 13 and 18 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art does not teach nor disclose according to claim 18, a musical baby bottle employing a liquid container, an electrical power source, and a musical player, a base containing the electrical power source and the musical player and forming a liquid container seat to receive and support the liquid container from beneath and wherein the base defines within its structure a cavity with a circular outer perimeter and an axial center, the improvement comprising an omnidirectional, gravity operated switching mechanism including a cavity floor formed within the base an inverted, frustoconical, inclined surface with a detent recess at the axial center of the cavity and the cavity floor is include toward the detent recess at an angle of no less than about two degrees and no greater than about ten degrees, and the floor slopes from the outer perimeter away from the liquid container and toward the axial center at a uniform angle of inclination relative thereto and a sphere movable by gravity to roll freely across the floor and beneath the liquid container when the liquid container is tilted from vertical alignment, whereby the sphere operates the switching actuator when the sphere is lodged in the detent recess to create an open circuit condition and when the sphere rolls out of the detent recess to create a closed circuit condition between the electrical power source and the musical player when

the base is tilted sufficiently from vertical alignment in combination with the rest of the claimed limitations. The closest prior art of Allen and Lam disclose a musical baby bottle comprising an electrical power source, a musical player, a base containing the electrical power source and the musical player and forming a liquid container seat to receive and support the liquid container from beneath, a gravity operated switch having a detent recess therein whereby the ball operates the switch actuator when lodged in the detent recess. Allen and Lam fail to disclose the improvement of an omnidirectional, gravity operated switching mechanism including a cavity floor formed within the base an inverted, frustoconical, inclined surface with a detent recess at the axial center of the cavity and the cavity floor is include toward the detent recess at an angle of no less than about two degrees and no greater than about ten degrees, and the floor slopes from the outer perimeter away from the liquid container and toward the axial center at a uniform angle of inclination relative thereto and a sphere movable by gravity to roll freely across the floor and beneath the liquid container when the liquid container is tilted from vertical alignment, whereby the sphere operates the switching actuator when the sphere is lodged in the detent recess to create an open circuit condition and when the sphere rolls out of the detent recess to create a closed circuit condition between the electrical power source and the musical player when the base is tilted sufficiently from vertical alignment in combination with the rest of the claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
